# Java Declare Multiple Variables

\ Previous

Next >

## **Declare Many Variables**

To declare more than one variable of the **same type**, you can use a comma-separated list:

### Example

Instead of writing:

```
int x = 5;
int y = 6;
int z = 50;
System.out.println(x + y + z);
```

You can simply write:

```
int x = 5, y = 6, z = 50;
System.out.println(x + y + z);
```

### One value to Multiple variables

You can also assign the **same value** to multiple variables in one line:

#### Example

```
int x, y, z;
x = y = z = 50;
System.out.println(x + y + z);
```

### Test Yourself With Exercises

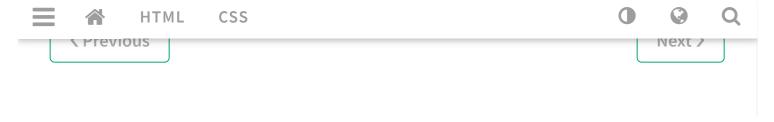

### **Exercise:**

Fill in the missing parts to create three variables of the same type, using a commaseparated list:

$$x = 5$$
  $y = 6$   $z = 50$ ;
